### **GF 2552 Metal Magmeter Flow Sensors**

The GF 2552 Metal Magmeter from Georg Fischer features all-stainless steel construction. The PVDF nosepiece and FKM 0-rings are the only other wetted materials. The 2552 installs quickly into standard  $1\frac{1}{4}$  in. or  $1\frac{1}{2}$  in. pipe outlets, and is adjustable to fit pipes from DN50 to DN2550 (2 to 102 in.). Two sensor lengths allow maximum flexibility to accommodate a variety of hardware configurations, including ball valves for hot-tap installations.

When equipped with the frequency output, the 2552 is compatible with any externally powered GF flow instrument, while the digital (S³L) output enables multi-channel compatibility with GF 8900, 9900 or 9950 Multi-Parameter instruments. Select the blind 4 to 20 mA current output to interface directly with data loggers, PLCs or telemetry systems. Key features include Empty Pipe Detection, LED-assisted troubleshooting, and bi-directional span capability (in 4 to 20 mA models).

The GF 3-0252 Configuration Tool is available to customize every performance feature in the 2552 so it can be adapted to the user's application requirements.

#### **Features**

- · NIST test certificate included
- Award winning hot-tap magnetic flow sensor up to DN2550 (102 in.)
- Patented Magmeter technology\*
- Operating range 0.05 to 10 m/s (0.15 to 33 ft/s)
- · Reliable operation in harsh environments
- Repeatable: ±0.5% of reading @ 25 °C
- Three output options: 4 to 20 mA, Frequency/ Digital (S³L)
- ISO or NPT Threads

### **Applications**

- Municipal Water Distribution
- Process and Coolant Flow
- Chemical Processing
- Wastewater
- Mining Applications
- Water Process Flow
- HVAC

#### Sensor Selection Guide

The 2552 Magmeter can be installed into a variety of pipe sizes. Follow the steps below to ensure that you choose the right sensor for your application.

#### Step 1: Determine how the sensor will be installed

#### A. For standard (non Hot-Tap) installations:

The height of the weldolet (threadolet) and pipe adapter(s) should be determined before the sensor is purchased.

- For retrofit installations, the stack height, or "A" dimension (see Fig. 1), is the overall height from the top of the pipe to the highest point of the stack.
- Sensor tip must be positioned at 10% of pipe ID
- For new installations, GF recommends a weldolet (threadolet) and an adapter to accommodate the 1½ in. (or 1½ in. for 2552-3) sensor process threads. The stack height, or "A" dimension (see Fig. 1), is the overall height from the top of the pipe to the highest point of the stack before the sensor is connected

#### B. For Hot-Tap installations:

The stack height of the ball valve, nipple weldolet (threadolet) and pipe adapters should be determined before the sensor is purchased.

- For retrofit installations, the ball valve must be at least a 1¼ in. (or 1½ in. for 2552-3) valve. The stack height, or "A" dimension (see Fig. 2), is the overall height from the top of the pipe to the top of the ball valve.
- Sensor tip base must be positioned at 10% of pipe ID
- For new installations, GF recommends a 1¼ in.
   or 1½ in. full port ball valve, a short nipple and a
   weldolet (threadolet). The stack height or "A"
   dimension (see Fig. 2) is the overall height from the
   top of the pipe to the top of the ball valve before the
   sensor is connected.

Fig. 1 Standard installation with "A" dimension using a weldolet (threadolet)

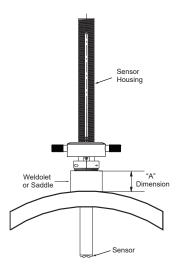

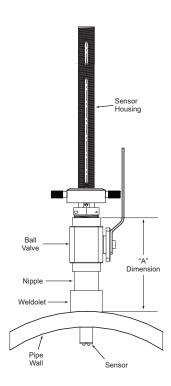

Fig. 2 Hot-Tap installation with "A" dimension using a ball valve, short nipple and weldolet (threadolet)

#### Step 2: Determine how the sensor will be installed

Once the "A" dimension is determined, go to the sensor selection table and find your "A" dimension on the left column. Next, find the appropriate pipe size at the top of the chart. To determine the correct sensor size locate where the pipe size column meets the max "A" dimension row.

- **3**: Use 3-2552-3, max. insertion = 368 mm (14.8 in)

This chart is based on the thickest commonly available pipe.

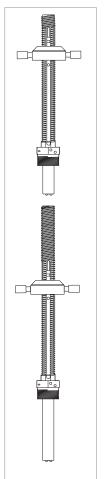

#### **Ordering Notes**

- Sensor insertion depth is the distance from the bottom of the sensor housing to the tip of the sensor.
- 2) Hot-Tap installations require a  $1\frac{1}{4}$  in. or  $1\frac{1}{2}$  in. ball valve.
- 3) See Sensor Selection Guide on previous page to determine the sensor length required.

#### **Application Tips**

- Minimum process liquid conductivity requirement is 20  $\mu$ S/cm.
- 1½ x 1¼ in. and 2 x 1¼ in. (2552-2 only) retrofit adapters are available for replacement installations of GF 2552 and 2540 sensors.
